

# Maintain laparoscopic clarity with FloShield™

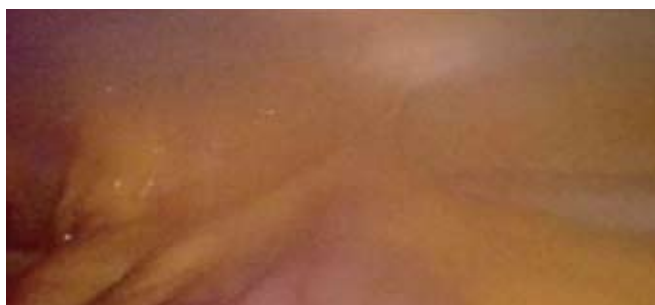

The FloShield™ device gives you an uninterrupted view by defogging and deflecting debris from the lens of your laparoscope without you having to remove the scope from the abdominal cavity for cleaning.

**FloShield™ eliminates fogging on the laparoscope**

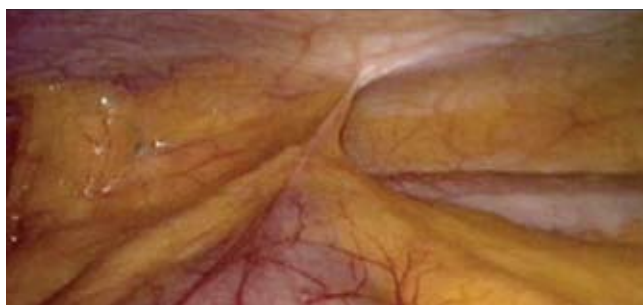

The FloShield™ system includes a disposable sheath that mounts to the laparoscope and uses existing airflow from the insufflator to create a continuous air curtain over the end of the lens. This continual airflow eliminates fogging and deflects debris from the working end of the laparoscope during the entire duration of the procedure.

**FloShield™ provides:**

- Reduction, or possible elimination, of the need to remove the laparoscope for cleaning during procedures
- Quick, easy set-up – usually in less than a minute
- No additional capital purchase or external energy source required
- Fits standard 10mm laparoscopes and 12mm trocars
